

### Abbreviation using backtracking:

Base Idea of problem is  $\rightarrow$  Subsequence.

string  $\Rightarrow$  pep

level - character

option - Yes and No of charact

## Results

How we can print numerical value.

## N-Queen Branch and Bound:

Complexity of "IsSafe to place Queen" in previous question? nearly  $= 4n \equiv O(n)$

Normal Queens

in Branch & Bound, we will reduce complexity from  $O(n)$  to  $O(1)$

① In a row, we have to place exactly one queen for sure. we can't place more than one queen in a row

② In next row, we have to check if position is safe or not.

Rows are at level, & Row will change at every level.  
Place queen 'q' and stop column & diagonals for future queen, this whole logic is called

"Branch & bound" method.

How to check isSafe in  $O(1)$

diagonal 2  $\rightarrow$  normal diagonal [from top-right to bottom-left]

diagonal  $\rightarrow$  Reverse diagonal [from top-left to bottom-right]

## ① How to Ensure Safety of Column;

	0	1	2	3
0		✓

2				
3				

0	1	2	3
	✓		

~~~~~

`boolean[] col = new boolean[column.length];`

## ② How to Ensure Safety of Normal diagonal [from top-right to bottom left]

|   | 0 | 1 | 2 | 3 | 4 |
|---|---|---|---|---|---|
| 0 | 0 | 1 | 2 | 3 | 4 |
| 1 | 1 | 2 | 3 | 4 | 5 |
| 2 | 2 | 3 | 4 | 5 | 6 |
| 3 | 3 | 4 | 5 | 6 | 7 |
| 4 | 4 | 5 | 6 | 7 | 8 |

→ direction

no. of diagonal = row + col

length of diagonal array to check safety is

$$2 \times \text{length} - 1 = 2 \times 5 - 1 = 9$$

| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|---|---|---|---|---|---|---|---|---|
|   |   |   | 7 |   |   |   |   |   |

### ③ How to Ensure safety in Reverse diagonal [from top-left to Bottom-Right]

|   | 0 | 1  | 2  | 3  | 4  |
|---|---|----|----|----|----|
| 0 | 0 | -1 | -2 | -3 | -4 |
| 1 | 1 | 0  | -1 | -2 | -3 |
| 2 | 2 | 1  | 0  | -1 | -2 |
| 3 | 3 | 2  | 1  | 0  | -1 |
| 4 | 4 | 3  | 2  | 1  | 0  |

row - col

→ direction of diagonal

How to find proper index

$$G_3 = (\text{row} - \text{col}) + (\text{length} - 1)$$

|   | 0 | 1 | 2 | 3 | 4 |
|---|---|---|---|---|---|
| 0 | 4 | 2 | 2 | 1 | 0 |
| 1 | 5 | 4 | 3 | 2 | 1 |
| 2 | 6 | 5 | 4 | 3 | 2 |
| 3 | 7 | 6 | 5 | 4 | 3 |
| 4 | 8 | 7 | 6 | 5 | 4 |

$$\text{length of diagonal} = 2 * \text{length} - 1 = 2 * 5 - 1 = 9$$

| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|---|---|---|---|---|---|---|---|---|
|   |   |   | ↑ |   |   |   |   |   |

(1, 2)

$$\text{Rev. diag ind} = (\text{row} - \text{col}) + (\text{length} - 1)$$

$$= (1 - 2) + (5 - 1)$$

$$= 3$$

to place a queen at  $i, j$  index

↳ pass three checks

- 
- ① check of column
  - ② check of diagonal
  - ③ check of rev. diagonal

→ if check is pass

↳ then make a mark on ① column →  $col[j] = true$

② Diagonal →  $diag1[i+j] = true$

③ Reverse diagonal →  $diag2[i-j + length-1] = true$

make call

unmark

① column ② Diagonal & ③ Revers. diagonal

Josephus Problem:

$n$  = no. of people in circle,  $k$   $\rightarrow$  number.

$n=7, k=4$  ✓

\_\_\_\_\_

\_\_\_\_\_

$$n=7, k=4$$

$$y = (x + k) \% \text{ n (current level) :}$$

$$\underline{\underline{x=3}}$$

$$y = (3+4) \% 7 = 7 \% 7 = 0$$

$$y = (1 + 4)^{1/7} = 5^{1/7} \approx 0.933$$

$$y = (5+4) \cdot 7 = 9 \cdot 7 = 2$$

Expectation  $\rightarrow$   $\langle n | k \rangle$   $\rightarrow$  final remain persons.
